

EEAC Annual Conference 2018:

Towards a Sustainable Europe by 2030

Key leverages for transformation

11 October 2018, Berlin

GENERAL INTRODUCTION

Realizing an ambitious and global sustainability transformation for the *People, Planet and Prosperity with Peace and Partnership* requires global action across all countries and policy areas. As the *European Environment and Sustainable Development Advisory Councils* (EEAC), we unite the forces of academia, civil society, the private sector and public bodies to push towards a *Sustainable Europe* in the very spirit of the 2030 Agenda with its 17 Sustainable Development Goals and the Paris Agreement.

However, implementing this Agenda and Agreement requires a sustainability transformation that so far tends to remain an abstract ambition rather than an inclusive and decided practice. The European Union will need to fundamentally change many policy areas, as will its member states. In order to prioritize we recommend focussing on some key lock-ins that have proven difficult to change but hold significant potential to shift towards sustainable development.

To advance on our journey on achieving the *Sustainable Development Goals* (SDGs) within and beyond Europe the 26th EEAC Annual Conference will be dedicated to identifying *some of these* key leverages and to explore new ideas about how to push them. The diversity of EEAC's scientific and stakeholder councils will meet in Berlin and deliberate with high-level experts from academia, society and politics. In inclusive and participatory conference formats, the network will further strengthen its bonds across national boundaries as well as academic and policy silos. During the conference, three breakout groups will serve substantial debates on i) the institutional foundations for transformative governance in Europe, ii) sustainable finance as a transformative lever for European Policy, and iii) the radical changes, potentials and risks of digitalization for a Sustainable Europe.

Together we will create an agora for an intellectually rich, participatory and effective science-society-policy exchange to foster common transformative efforts towards a *Sustainable Europe by 2030* and beyond.

BREAKOUT GROUPS

- ***“Environmental Governance: reshaping institutions and policy for transformative changes”***

European environmental policy is facing a veritable crisis. Economic crises in the aftermath of the breakdown of the financial markets, the pressure of globalization, the rise in populist sentiments, accompanied by a fall of trust in key societal institutions like media, science and government do challenge a transformative sustainability agenda. Some would even argue that there is little legitimacy for ambitious and progressive political action for sustainable development. Environmental governance is thus in need of a bold self-affirmation: Europe's future and prosperity is dependent on the successful implementation of a transformative sustainability agenda across key policy fields and sectors until 2030.

The conference session will address the need for changes in political institutions as well as in the organization of the decision-making process to overcome incrementalism to eventually foster future-oriented decision-making. Moreover, conference participants will be invited to discuss options to mobilize and integrate existing scientific knowledge as well as civic engagement into policy-making to achieve a sustainable Europe while also restoring trust into democratic institutions. These challenges will be faced at the interface between European and national perspectives.

➤ ***“Sustainable Finance: Reshaping the finance sector as transformative lever”***

The financial sector plays a crucial role in sustainably transforming economies and societies and in preserving the global commons. Capital flows impact the environmental and social consequences of the real economy, while at the same time the finance sector is learning about environmental, political, economic and societal risks affecting investments. It is high time for strong and robust structures that enhance and ensure sustainable development.

The conference session will invite participants to exchange knowledge, practices and viewpoints with regard to sustainable finance. The main question will be whether and how advisory councils on the environment and sustainable development and other relevant partners are willing to challenge sustainable finance and whether there is common ground for joint initiatives at the European level?

➤ ***“Digitalization: Leverage or Threat for the Global Sustainability Transformation”***

Digitalization is changing the world. The interaction of data collection, interlinked networks, artificial intelligence and robotics are expected to lead to radical changes in personal, social and economic life worldwide. Often, digitalization is experienced and presented as an unstoppable, accelerating process. However, it is not a force of nature, but a development driven by human beings. Anticipating its far-reaching and global impact, digitalization must be understood as a strong matter of sustainability. It must be guided by overarching objectives – in the light of, but also beyond the 2030 Agenda.

The conference session will provide space for the discussion on how digitalization can be explicitly linked to societal goals, especially as a means for a global transformation towards sustainability. How will digitalization change our life on this planet? What goals will it serve? What opportunities and risks does it entail? Who will gain or lose power? How can digitalization be used to solve the great human challenges.

ADDRESSEES OF THE CONFERENCE

The conference addresses experts from policy, society, science and the private sector working in the sustainability context in Europe. As hosts, EEAC's national and sub-national advisory councils on environment and sustainable development will enable a cooperative atmosphere which enhances further networking and exchange opportunities.

For more information

The programme will be uploaded in the course of May 2018. If you have any inquiries in the meantime, please do not hesitate to contact the EEAC secretariat at secretariat@eeac.eu

The 26th EEAC Annual Conference is jointly organised by:

The German Council for Sustainable Development (RNE)

The German Advisory Council on the Environment (SRU)

German Advisory Council on Global Change (WBGU)

The European Environment and Sustainable Development Advisory Councils Network (EEAC)
